

DCS PolyMud Dry

Clay Control / Viscoifier

Description

PolyMud Dry is an easy mixing dry polymer powder that will encapsulate clay cuttings and can prevent the clay from sticking to the bit and to drill pipe and control clay swelling. PolyMud Dry is a long chain polymer that when added directly to freshwater drilling fluids will hydrate and coat clay cuttings. PolyMud Dry should be used as a clay-free fluid and is not recommended for mixing with bentonite fluids.

Characteristics

- PolyMud Dry is a white dry powder
- Mix PolyMud Dry slowly through the hopper to create a high viscosity clear drilling fluid
- PolyMud Dry will help prevent mud rings and bit balling
- PolyMud Dry will reduce torque and aid lubrication of the drill string
- PolyMud Dry can be broken down with common bleach (sodium hypochlorite)

- PolyMud Dry is not recommended for use with mud cleaners and mud reclaimers (may blind off the shaker screens)

Mixing Dosage Rates

- Mix PolyMud Dry slowly through the hopper at the rate of 3.5 to 10.5 lbs. per 1000 gallons fresh water

Packaging

PolyMud is available in 14 and 27.5 lb. pails
